

EURO

EuroCC-Austria

Mission:

Set up 33 National Competence Centres (NCCs)

In the fields:

- High-Performance Computing (HPC)
- High-Performance Data Analytics (HPDA)
- Artificial Intelligence (AI)

Participating countries (33)

Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Montenegro, Netherlands, North Macedonia, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey, United Kingdom

Supported by **CASTIEL** (Coordination and Support Action)

Structure of NCC Austria

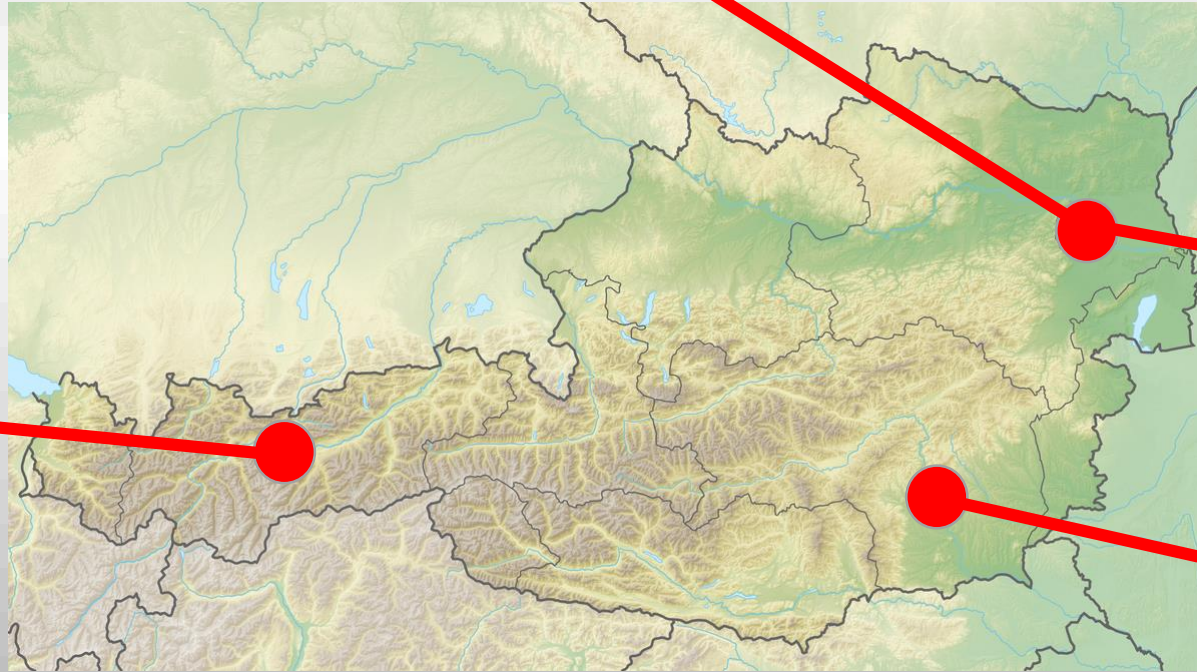

VIENNA
SCIENTIFIC
CLUSTER

universität

(lead)

universität
innsbruck

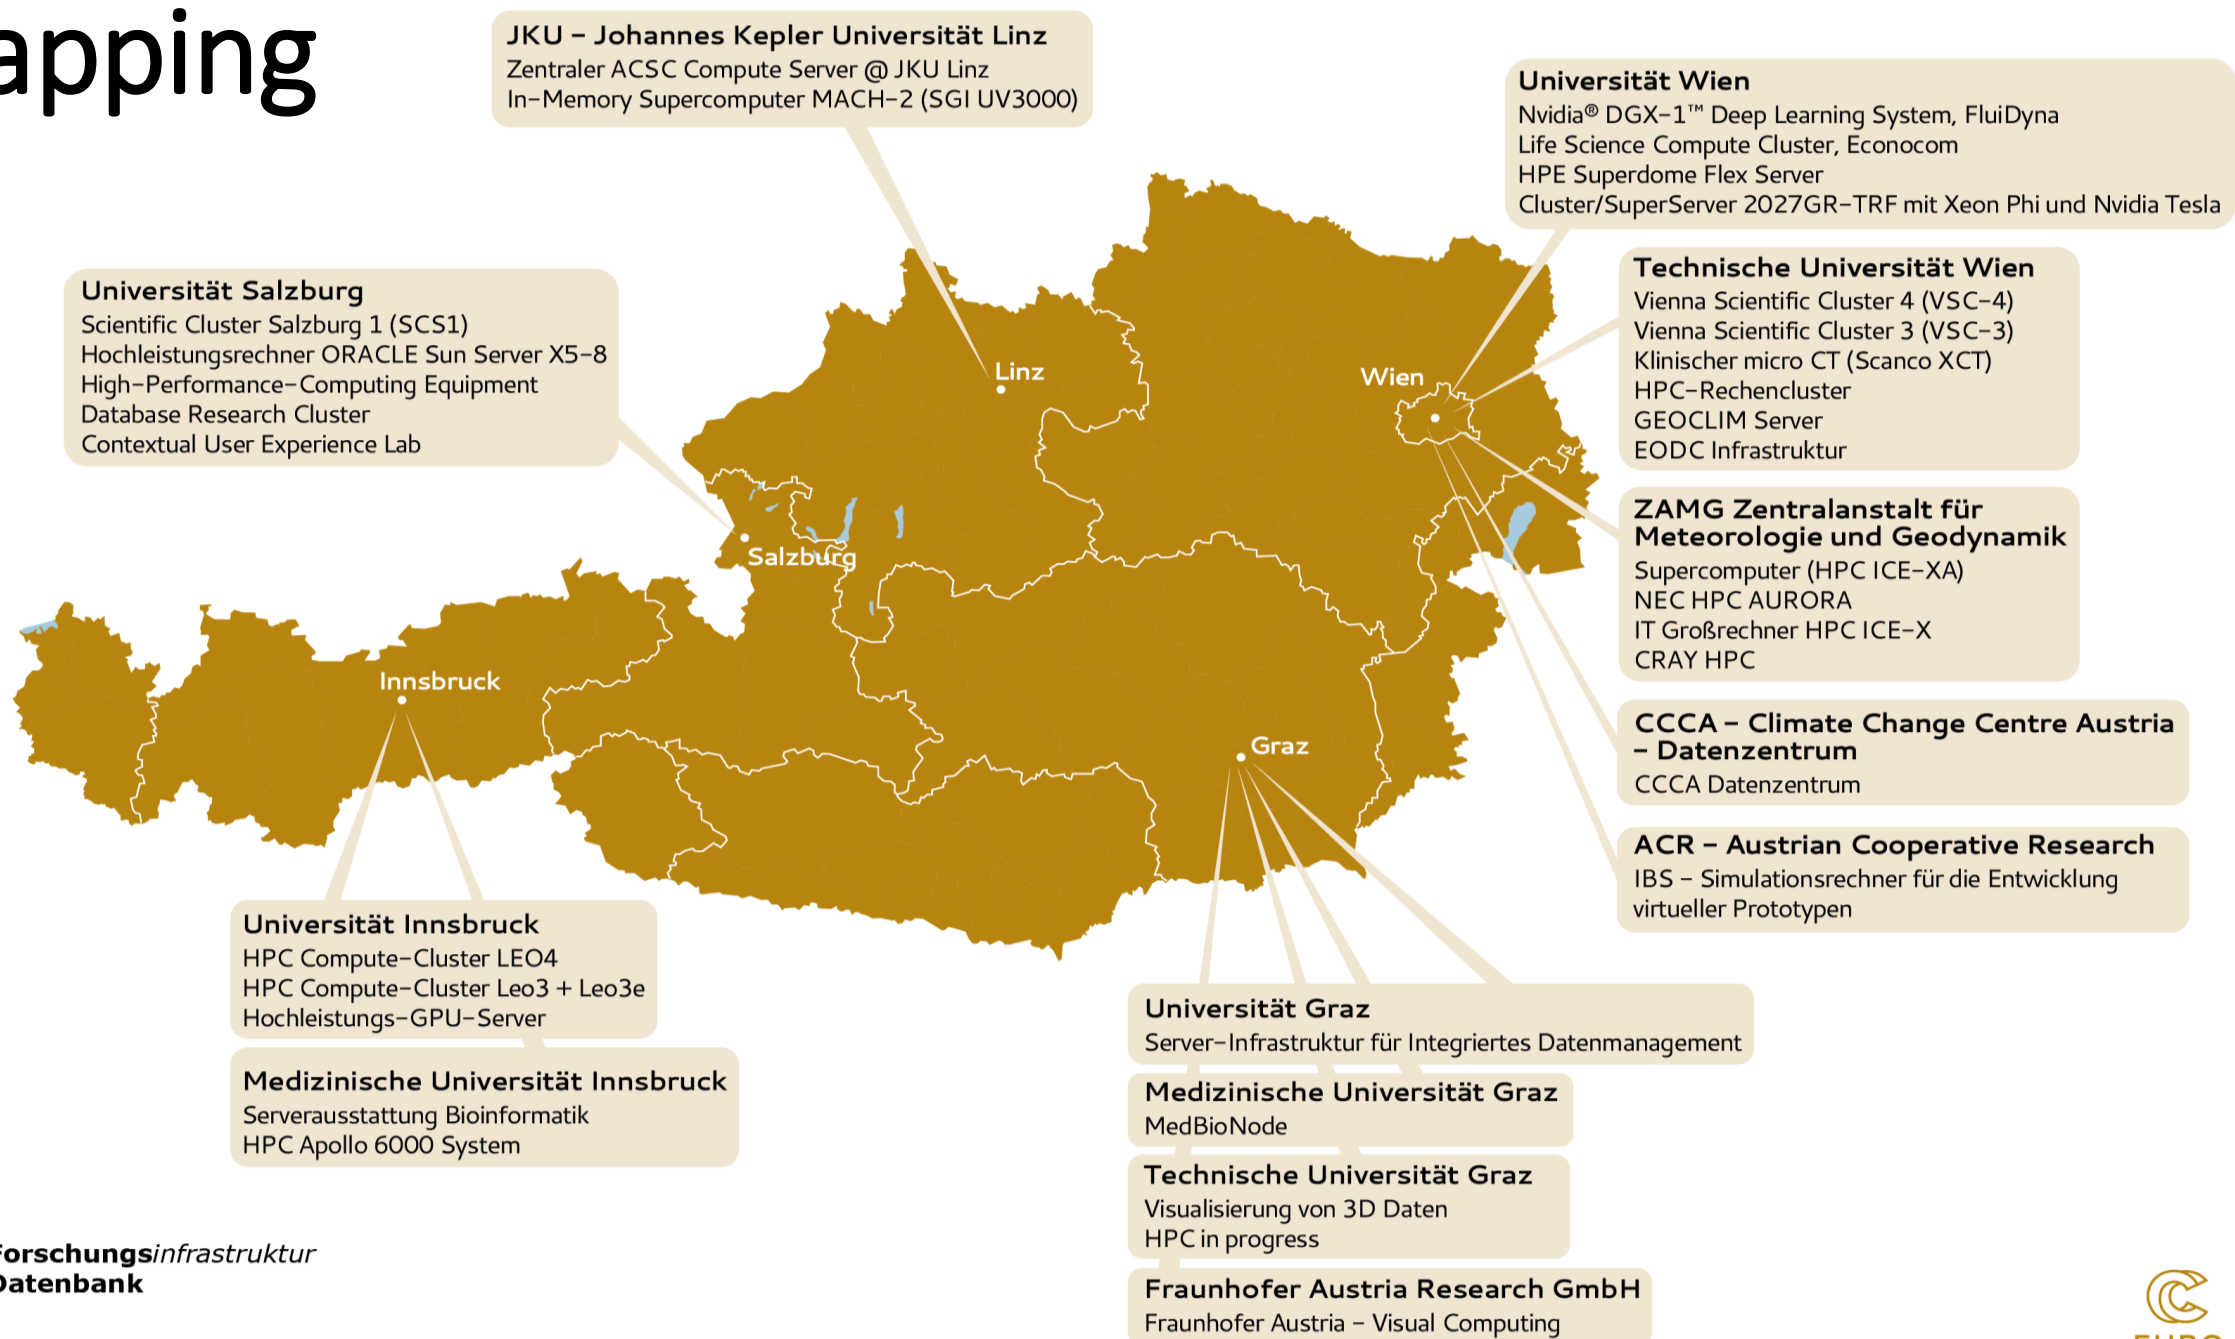

INiTS

- Vernetzung mit Experten und HPC/Big Data/KI-Anbietern
- Training und Schulungen
- Zugang zu Software und Rechenzeit auf Hochleistungsrechnern
- Begleitung bei der Umsetzung Ihrer Projekte
- Unterstützung bei öffentlichem Förderwesen

Reintrieb

Innovative marine propulsion system developed by Austrian cleantech company goes into next phase of development

- Efficient inland waterway propulsion that enables ships to navigate at lower water levels caused by climate change
- At least the same amount of thrust while reducing the ship's draught by 25% due to the innovative design based on two propellers
- No loss of loading capacity and less downtime due to low water levels thanks to the optimised side-by-side propulsion system

Support by SHAPE, Vienna Scientific Cluster (VSC) and EuroCC Austria

- Funding to model and optimise the side-by-side prototype by SHAPE
- Complex Computational Fluid Dynamics (CFD) simulations will be done at the Vienna Scientific Cluster (VSC)
- Reintrieb gets access to the supercomputer VSC-4 and help from HPC and CFD experts of the VSC Research Center at TU Wien

SUCCESS STORY TAILSIT – tailored simulation tools

TAILSIT

- developer of simulation software for problems in electromagnetics, acoustics, structural analysis and heat conduction

- single CPU, shared memory

EuroCC@Austria with the SHAPE program

- allocation of exclusive computing time within the high performance computing (HPC) infrastructure of the Vienna Scientific Cluster
- parallelization of the code via message passing interface (MPI)
- transition from shared memory to distributed memory

- distributed memory – parallelization

ADVANTAGES

- reduction of computing time
- increase in software efficiency
- improved competitive advantages by reduced time to market
- adaption of software to costumers' needs

This project has received funding from the European High-Performance Computing Joint Undertaking (JU) under grant agreement No 951732. The JU receives support from the European Union's Horizon 2020 research and innovation programme and Germany, Bulgaria, Austria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Greece, Hungary, Ireland, Italy, Lithuania, Latvia, Poland, Portugal, Romania, Slovenia, Spain, Sweden, United Kingdom, France, Netherlands, Belgium, Luxembourg, Slovakia, Norway, Switzerland, Turkey, Republic of North Macedonia, Iceland, Montenegro
